Introduction

Beyond platform or personality, public perception of political figures and their stances is strongly influenced by their portrayal in the media. The 2025 New York City mayoral election and its aftermath attracted significant news coverage, with now mayor-elect Zohran Mamdani emerging as one of the race's most widely discussed candidates. Mamdani's campaign, centered on progressive policy positions and affordability-based proposals, drew substantial public attention, contributed to record voter turnout, and has continued to generate sustained coverage following the election (Oppenheim, 2025). While media portrayals during campaigns are often closely scrutinized, less attention is given to how those portrayals shift following election. Even though Mamdani was running for the mayor of one city, albeit one of the most important cities in the world, the media portrayed Mamdani as a figure with federal influence, with the potential to change the Democratic Party as we know it.

This paper considers how media coverage of Mamdani has changed pre- and post-election. To accomplish this, we analyzed 511 news articles from the three weeks before and the three weeks after his victory in the mayoral election on the basis of thematic content and sentiment. Using manually annotated data followed by Term Frequency - Inverse Document Frequency (TF-IDF) and Large Language Model (LLM) characterization, we found that the news coverage about Mamdani was more critical before the election, however after the mayoral election positive news coverage increased, while negative news coverage decreased. Additionally, our analysis revealed that the most common topics that were present within the news articles were opinions of other prominent polictical figures (26.3 %), election results and campaign reporting (25%) and articles about Mamdani's political beliefs and identity (16.5%). Articles about the specific policies that he was campaigning on were a much smaller portion of the total news coverage. These results suggest news sources focused much more on Mamdani's identity and other's opinions over the actual policies he was campaigning on. Furthermore, we the shift in sentiment post-election is likely a result of news outlets caving to public opinions, as Mamdani clearly won over New York, America and the World.

Data

To examine media representations of Zohran Mamdani, we constructed a dataset of news articles collected from the NewsAPI mentioning Mamdani's name across a six-week window centered on the 2025 New York City mayoral election (November 4, 2025). Initially, we intended to collect articles spanning the period between Mamdani's victory in the Democratic Party primary elections and the final mayoral election. This proved infeasible due to limitations of the free tier of NewsAPI, which restricts queries to articles no older than a month, and only permits collection of a maximum of 100 articles per request.

In response to these limitations, we revised the scope of our project to focus on a time frame within the bounds of the free tier: three weeks prior to, and three weeks following the date of the mayoral election. We treated each week as an independent collection window and collected up to 100 articles per week.

Our data collection incorporated several filtering steps. We restricted articles to English-language sources within each specified time frame containing the term "Zohran Mamdani" in the headline, sorted by NewsAPI's popularity metric to prioritize widely circulated content.

We then applied a semi-automated screening process to retain only North American news sources. This involved automatically accepting articles whose source IDs matched a pre-compiled list of verified North American outlets provided by NewsAPI, while articles from sources without an assigned ID were reviewed manually through an interactive prompt to determine whether they should be included. Finally, we applied a title-based duplicate removal process to ensure that articles published on multiple outlets were only represented once in the dataset.

Due to screening, the final number of retained articles was slightly below 100 per week, ranging from 65 to 93 (Mean = 85.2 ± 10.9) (Table 1). Our collection resulted in 277 articles from the pre-election period and 234 articles post-election, for a total of 511 articles. Retained articles were stored in JSON format, preserving titles, descriptions, content excerpts, publication date, links and source information for subsequent annotation and analysis.

Weekly Article Collection Counts

Week	# Articles
Oct. 14 – Oct. 21	92
Oct. 22 – Oct. 28	92
Oct. 29 – Nov. 4	93
Nov. 5 – Nov. 11	89
Nov. 12 – Nov. 18	65
Nov. 19 – Nov. 25	80

Table 1: Number of Articles Collected Weekly

Methods

Once the data had been collected, we randomly selected 200 articles from the whole dataset. Each person was given ~66 articles and built their own set of topical categories from the subset they were given. Random selection and then shuffling of open coded articles ensured that we were reviewing a variety of articles from a variety of different days, so the open coding subsection was not overly populated by articles about similar topics. We then compared the topics we created and found lots of similarity between what we had found individually. There was some overlap in topics, such as "Relationship with Trump" and "Political Figure Opinions", so we decided to combine certain categories and create a Taxonomy Guide (Appendix 1) to clearly describe each category, positive and negative examples and edge cases. However, since we all open-coded and created categories individually, which were later merged, this poses the risk of each annotator interpreting topics slightly differently.

While annotating, we focused on the tone and key words to determine the sentiment and topic the article should be placed under. The article, title, and opening paragraph were generally used to determine the tone and topic of the article. The source of the article was also taken into consideration for the sentiment, as news sources that are right leaning tended to be more critical of Mamdani, however the news source was considered less than the actual content of the article. The titles of news articles are often more intense than the actual article itself, including clickbait, rhetorical questions or other framing devices which may have skewed our annotations of the article's sentiment.

When we came across a news story that had an ambiguous or mixed topic, we read the entire article and checked the taxonomy to determine which category it fit under best. Once we decided, we added the edge case to the taxonomy to ensure that similar articles would be annotated in the same way. In terms of mixed sentiment, articles that contained both strong praise and criticism for Mamdani were considered neutral, as they are not directly positive or negative.

We characterized our data using both LLM-based summaries and TF-IDF for each of the annotated categories. To prepare the data for these characterizations, we concatenated all text-based components – title, description and content excerpt – into a single text item to capture the complete range of information previously used in annotation. For each category, the LLM summary was produced by supplying ChatGPT with all concatenated texts belonging to the category along with the prompt: "Provide a concise, one paragraph summary of the type of content in the following category of article descriptions." Length precisions were added to the prompt in order to limit the verbosity of the model, and to ensure that the core concepts of the summary were not diluted by extraneous detail.

TF-IDF was performed using the same concatenated text items. Prior to analysis, all text was converted to lowercase, and preprocessed. Preprocessing involved first excluding common English words using the scikit-learn English stopword list. We additionally excluded high-frequency news vocabulary and context-specific terms such as "Mamdani", "New York" and "mayor". Prior to exclusion, these common words tended to dominate the extracted terms without contributing to meaningful category-level distinctions. We then merged multi-word expressions referring to individuals or entities (e.g. "Donald Trump", "Jessica Tisch", "White House") into single underscore-linked terms to ensure they were treated as a single term.

Following preprocessing, we computed a TF-IDF model to capture category-specific term distributions using scikit-learn's TfIdfVectorizer with document-length normalization disabled. We used this to compute the mean TF-IDF score for each term across all articles in the category, from which we extracted the top ten category terms. All analyses were done in Python using pandas (version 2.2.3) and scikit-learn (version 2.2.2)

Results

We developed eight categories to apply to the collected articles during annotation, which can be grouped into three main classes (Appendix 1). The first class, Political Power,

contains coverage relating to Mamdani's position and activity in the political sphere. This comprises Political Figure Opinions, which includes reporting on Mamdani's relationships with other political figures, and Election & Campaign Results, which includes articles reporting on the mayoral race and election outcomes.

The second class, Policy Implementations, encompasses all categories pertaining to Mamdani's proposed or enacted policy agenda. This includes Affordability, covering plans aimed at reducing cost of living in New York; Police & Crime, referring to Mamdani's position on the NYPD and crime management; and Immigration/ICE, covering his policies and actions relating to immigration policy.

The final class, Cultural/Personal Framing, captures reporting on Mamdani's personal background, identity and cultural visibility. This includes Personal Life, focused on biographical content unrelated to political office; Political Identity, referring to Mamdani's ideologies and identity; and Popular Culture, which centers Mamdani's portrayal in popular culture and his interactions with cultural figures.

LLM-based characterization and TF-IDF analysis were used to both validate and explore our eight annotation categories.

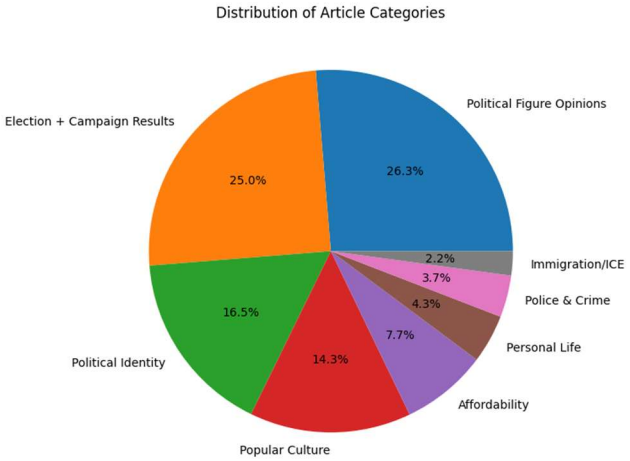

Figure 1: Pie Chart of Category Distribution

Appendix 3 contains the category definitions, the representative statement provided by the LLM once supplied with the contents of each category and corresponding TF-IDF terms. In all cases, the model's characterization was thematically consistent with the definition of the category. TF-IDF analysis revealed category-specific high weight terms which

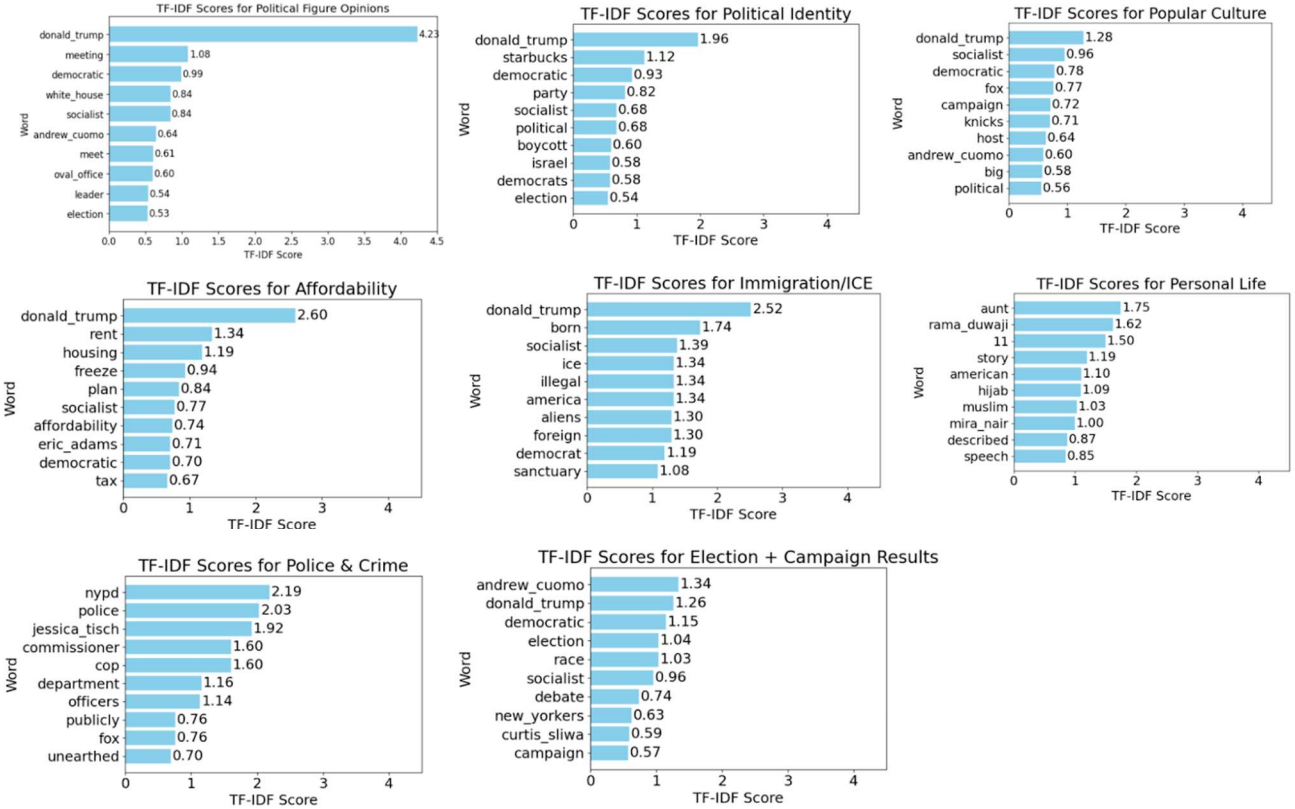

Figure 2: TF-IDF Scores for Most Common Words in Each Category

also aligned closely with both category definitions and LLM summaries.

Figure 1 demonstrates the distribution of categories across the articles. It is clear that 'Political Figure Opinions' and Election + Campaign Results are the most common articles about Zohran Mamdani that appear in the news. Those two categories alone make up over half of the news that has been published about Mamdani. Popular Culture and Political Identity follow with around 15% of the news articles each. The policy-specific categories (Affordability, Police & Crime and Immigration/ICE) each make up less than 10% of the dataset, making up a combined 13.6%. 4.3% of the Articles discuss Mamdani's Personal life.

Figure 2 reveals the 10 most common words in articles from each category. 'Political Figure Opinions' had the strongest TF-IDF score for the word 'Donald Trump', indicating that Trump was mentioned often in these articles. The rest of the scores are under 3.0.

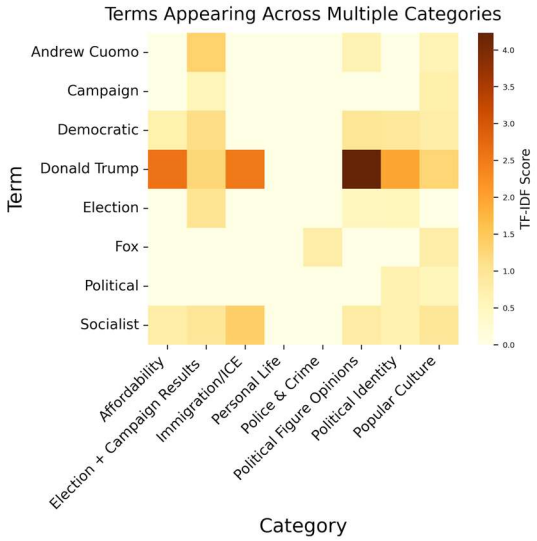

Figure 3: Heatmap of TF-IDF-Derived Terms Appearing Across Multiple Categories.

Of the 80 terms extracted by TF–IDF, eight appeared in more than one category (Figure 3). None of these shared terms were present in Personal Life, whereas the Popular Culture category contained all shared terms excluding "Election." Police & Crime contained only one of the shared terms, "Fox". Two high-frequency terms — "Socialist" and "Donald Trump" — were observed across six of the eight categories, with both appearing in all categories except Personal Life and Police & Crime. "Donald Trump" had the highest overall TF–IDF weight among the recurring terms. The term "Democratic" was observed in five categories, corresponding to all categories containing the high-frequency terms except Immigration/ICE. "Election" and "Cuomo" appeared in three categories each, and "Political," "Fox," and "Campaign" were each only present in two categories. No terms were shared across exactly four, seven, or eight categories.

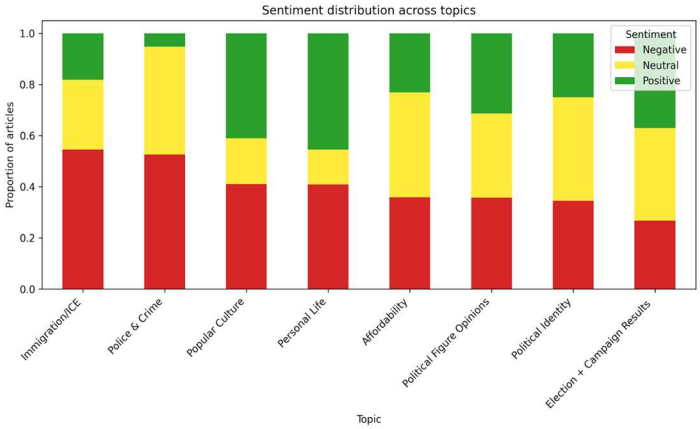

Figure 4: Sentiment Distribution Across Eight Categories of Media Coverage of Zohran Mamdani

The normalized sentiment distribution in Figure 4 represents media coverage of Zohran Mamdani in the eight topical categories. Each bar shows the proportion of articles within a topic categorized as positive, negative or neutral based on our manual annotation. Coverage related to Police & Crime is the least positive category, with negative and neutral articles amounting for ~54% and ~41% respectively. This pattern is followed by Immigration/ICE category with only ~17% positive coverage.

In contrast, Popular Culture & Personal Life exhibit more favorable media coverage. Positive coverage constitutes roughly 45% of articles in the Personal Life category, while Popular Culture shows a similarly favorable pattern with approximately 40% positive coverage. Political Figure Opinions exhibits a more balanced sentiment profile with neutral articles making up 36% of coverage and positive and negative sentiment distributed relatively evenly.

Overall, the media sentiment toward Mamdani varies systematically by topics, with policing and immigration attracting the most negative coverage, whereas personal and cultural framing is associated with a more positive portrayal.

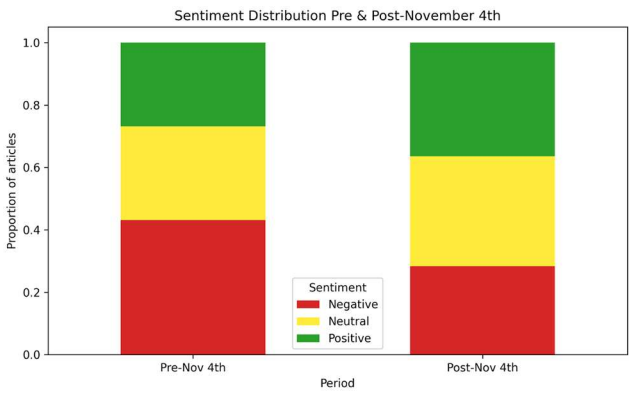

Figure 5: Sentiment Distribution in Media Coverage of Zohran Mamdani Pre & Post November 4th Election

Figure 5 represents the normalized sentiment distribution in media coverage of Zohran Mamdani before and after November 4, the date of his election. Prior to November 4, the media coverage is predominantly negative with approximately 43% of articles categorized as negative. The neutral and positive coverage is around 30% and 27% respectively before the election.

By contrast, there is a significant sentiment distribution shift after the election date. The proportion of negative articles decreases to 28% while neutral coverage slightly increases to 36%, and positive coverage rises substantially to 37% after November 4. While pre-election media coverage is predominantly negative, positive sentiment becomes the most prevalent classification post-election period.

Discussion

The results reveal that the media discourse on Zohran Mamdani is structured by topical framing, and the sentiment varies systematically depending on the context in which he is discussed. Figure 1 demonstrates that the media coverage is dominated by Election + Campaign Results and Political Figure Opinions categories. Mamdani is framed as a political figure whose ideology and electoral viability is central to the media narrative. The coverage is less focused on his policies on affordability and is rather focused on competitive or mediatic aspects of the electoral race which is consistent with the type of political journalism seeking engagement.

The policy-specific categories (Affordability, Police & Crime, and Immigration/ICE) combined make up only 13.6% of the data. The sentiment across the policy-oriented topics varies significantly. Articles categorized under Police & Crime and Immigration/ICE contain overwhelmingly negative sentiment with over half of the topical content categorized as negative. However, articles categorized under Affordability are rather balanced. 40% of the articles under this category are considered to be neutral, and negative coverage is slightly higher than positive coverage. This suggests that economics and social policy proposals invite a broader range of evaluation.

Although Police & Crime and Immigration/ICE categories contain the highest rate of negative sentiment, they make up only 5.9% of the articles in our dataset. Our justification for separating these topics into their unique categories was the use of certain words that are not shared across other categories. As shown in Figure 2, the most common terms according to their TF-IDF scores in the Police & Crime category are “NYPD”, “police”, and "Jessica Tisch" which are not shared across other categories. Although the ICE/Immigration category has more common words with other categories, it has its fair share of highest TF-IDF scoring words like “ICE”, “illegal”, and “aliens” which are distinct to this category.

A significant finding from our research was that Personal Life & Popular Culture had the most positive sentiment with approximately 47% and 40% positive article distribution within these categories respectively. This indicates that humanizing and cultural portrayals play a significant role in shaping Mamdani’s positive media image. When Mamdani is framed as an individual or cultural figure rather than a policymaker or ideological representative, the media coverage becomes much more favorable. This highlights that those that are skeptical of or disagree with Mamdani’s policies do not necessarily dislike him as a person.

The categories that make up a smaller percentage of the distribution, such as Personal Life and policy-specific categories, include more irrelevant words with high TF-IDF scores, for example, “described” in Personal Life and “publicly” and “unearthed” in Police & Crime. These common words provide very little insight into the actual content of the articles, even though they have high TF-IDF scores. This suggests that the common words are not as strong of a content indicator for the smaller categories.

Additionally, our TF-IDF analysis showed that terms like “Donald Trump” and “socialist” occur commonly across our eight topical categories. National political figures and ideological labels are central to the media coverage. This reinforces Mamdani’s image as a symbol of progressive national politics rather than a local candidate. Media narrative around Mamdani is significantly shaped by ideology and national political polarization rather than his engagement with local policy implementations.

Finally, Figure 5 reveals that media portrayals of Zohran Mamdani have significantly shifted following the election on November 4th. Pre-election coverage is predominantly negative with approximately 43%, 30%, and 27% of the articles categorized negative, neutral, and positive respec-

tively. Following Mamdani's' electoral victory on November 4th, the coverage shifts positively. The proportion of negative articles decreases to 28% while neutral coverage slightly increases to 36%, and positive coverage rises substantially to 37%. This suggests a shift from contestation to recognition of political legitimacy. The media framing evolves once political authority is established, positioning Mamdani as a legitimate officeholder rather than a contested Candidate.

In summary, our findings show that Zohran Mamdani's media coverage is profoundly contextual. He is not framed as a local policy maker, but rather as a national ideological symbol, a narrative driven by opinion-focused coverage reinforced by prevalent use of terms like "Donald Trump" and "socialist". The ideological candidate is contested, but the personal and cultural figure is celebrated in the coverage underlying the dual portrayal of the media. The election itself acts as a critical turning point as negative coverage decreases while positive recognition increases after November 4th, when Mamdani not only beat his closest competitor by just under 9% and held 50.4% of the vote (CNN). This can be interpreted as the media responding to or aligning with prevailing public opinion.

Appendix

1. Taxonomy Guide

1. Motivation & Context

This taxonomy document is a guide to annotating North American news articles about New York City Mayor-Elect Zohran Mamdani. The articles will be from both before and after his successful Mayoral Election on November 4th, 2025, in an attempt to determine the difference in news coverage before and after he won the election. The annotation will include both semantic and thematic categorization to identify the most common types of news coverage about Mamdani, and how he is being portrayed in each of these news categories.

Since this election occurred very recently, there is little analysis of the news coverage following this election. This election, specifically Mamdani's campaign, gained international attention and many people around the world focused on the election of one of the most influential cities worldwide. Mamdani became a very prominent political figure, and the media focused on almost every aspect of his identity and campaign, asking him about his wife, opinions on popular culture, and asking everyone else, New Yorker or not, about their opinions about him and his ideas.

Categorizing news articles into one topic is not easy, since many articles often reference other events or other opinions; this makes our data messy. Furthermore, there is no consistent agreed-upon set of categories when annotating news articles that we believed would allow us to gain a solid understanding of the different topics that were covered across the news, as this election was so unique.

This taxonomy provides a consistent coding scheme for analyzing topical content covered by media outlets when reporting on Zohran Mamdani. As human annotators, this ensures that everyone has the same reference and description of the categories to ensure reliable, comprehensive, and consistent annotation across the dataset.

2. Overview of Types & Their Relationships

The taxonomy covers 8 topical categories covering political, personal, and policy-oriented dimensions of Mamdani's social media presence.

a. Political Figure Opinions
b. Election + Campaign Results
c. Political Identity
d. Popular Culture
e. Affordability
f. Personal Life
g. Police & Crime
h. Immigration / ICE

The categories are conceptually distinct but still related to each other on a higher level. Due to overlapping context, they can be grouped into broader categories as below.

Political Power
1. Political Figure Opinions
2. Election + Campaign Results

Policy Implementations
1. Affordability
2. Police & Crime
3. Immigration / ICE

Cultural/Personal Framing
1. Personal Life
2. Political Identity
3. Popular Culture

3. List of Types & Definitions

<u>Political Figure Opinions</u>

Definition: This category includes articles that focus on Mamdani's relationship with other prominent political figures, such as President Trump, Members of Congress, Governors, and international figures. We also included the opinions of people that may not necessarily have political positions, but hold political influence, including billionaires like Elon Musk and Bill Ackman.

Positive examples:
- Articles about Endorsements or Criticisms from political figures
- Articles about Mamdani visiting the White House or Interacting with Donald Trump

Negative examples:
- Articles about celebrities supporting/criticising Mamdani, instead they should be placed in 'Pop Culture'

Edge Cases:
- Articles about Andrew Cuomo or Curtis Sliwa, although they are political figures, we have placed these articles in 'Campaign and Election Results', as these articles are directly about the election.

Campaign + Election Results

Definition: This category encompasses all of the articles that discuss the election and Mamdani's campaign. This includes articles about campaign funding, reporting the result of the election and the electoral debates.

Positive examples:
- Articles about Donations and Funding campaigns
- Articles reporting and tracking election results
- Articles highlighting campaign strategies

Negative examples:
- Articles talking about criticism from other political figures during the campaign period, those would go in "Political Figure Opinions"
- Articles that explain and focus on a specific policy or issue Mamdani attempts to tackle, those would go in one of the Policy Implementation Categories: Affordability, Police & Crime, Immigration / ICE

Edge Cases:
- Articles talking about Andrew Cuomo or Curtis Sliwa's opinions should be included, as that is a part of their own campaigns.

Affordability

Definition: Mamdani's campaign was centered around making New York more affordable, and he intends to implement policies to freeze rent, lower the prices of groceries or make buses free. Articles discussing these policies fall within this category.

Positive examples:
- Explanations, praise or criticism of Mamdani's affordability and monetary policies, including rent freezes, tax increases, bussing initiatives, grocery initiatives.

Negative examples:
- Articles about his other policies, such as community safety and immigration

Edge Cases:
- Political figure criticism about affordability should not be included either, it should be placed in Political Figure Opinions

Police & Crime

Definition: Articles that discuss Mamdani's position and policies related to the Police and Crime. Critics claimed that Mamdani would defund the NYPD and it was one of their biggest criticisms against him. He claimed that he did not intend to do so, but instead strived create a Department of Community Safety to tackle homelessness, drug addiction and mental health crises so the Police could handle serious crimes.

Positive examples:
- Articles about Mamdani interacting or being asked about the NYPD
- Articles about NYC crime rates
- Articles about the Department of Community Safety

Negative examples:
- Articles about other policies

Edge Cases:
- Articles about Immigration related crimes should be included in the Immigration/ICE Category instead

Immigration / ICE

Definition: New York City has had a number of ICE Raids in the past 6 months. Any articles that highlight Mamdani's stance on Immigration as a whole and ICE Raids are included within this category.

Positive examples:
- Articles about Mamdani's stance on ICE and ICE Raids
- Articles about Mamdani's stance on Immigration and Immigrant groups.

Negative examples:
- Articles about Mamdani's own cultural identity should be included in Personal Life

Edge Cases:
- Articles questioning Mamdani's citizenship and its validity should be included in Personal Life.

Personal Life

Definition: Any articles that focus on Mamdani family members, his personal identity and what he does in his personal time.

Positive examples:
- Articles about Mamdani's Aunt, Wife and other family members
- Articles about Mamdani's faith and cultural background

Negative examples:
- Articles about his favourite forms of entertainment would fall under the Pop Culture category

Edge Cases:
- Any articles about his former rap career should be placed under Pop Culture,

Political Identity

Definition: This category encompasses articles highlighting Mamdani's own political beliefs, not the policies he is campaigning on. Articles that focus on his "communist ideology" or personal political choices, such as boycotts, are included in this category

Positive examples:
- Articles about Mamdani's Starbucks Boycott
- Articles about how Mamdani is/is not Antisemetic.
- Articles comparing Mamdani's ideologies to more centrist democrats.

Negative examples:
- Articles about specific policies that Mamdani is running his campaign on. (These fit under Policy Implementation Categories or 'Campaign + Election Results')
- Articles about Mamdani's upbringing and personal stories, those are placed in the 'Personal Life" Category

Edge Cases:

Popular Culture

Definition: This category contains articles about Mamdani's interactions with pop cultural figures. This includes celebrity criticism and endorsements, talk shows and podcasts, and Mamdani's opinions about pop culture.

Positive examples:
- Articles about celebrity opinions of Zohran Mamdani
- Articles about Mamdani's favourite/least favourite songs, movies, TV shows, etc.
- Articles highlighting talk show or podcast appearances

Negative examples:
- Articles about specific policies, as they are actions, not beliefs.
- Political figure criticism, that falls under 'Political Figure Opinions'

Edge Cases:
- Articles about commentary on Mamdani by non-political figures who nonetheless have political influence, such as Elon Musk and Bill Ackman should not be included, and should be categorized as Political Figure Opinions instead.

4. Argument For Comprehensiveness

The taxonomy systematically partitions the set of articles into eight mutually exclusive, comprehensive and well-defined thematic categories. These categories map to the three primary areas of Mamdani's representation in the press – his role as a political figure, his positions on important policy decisions, and his personal and public identity. Developed through extensive open coding and revision, the taxonomy is designed to span the range of possible articles without duplication or gaps. Additionally, the typology supplies explicit definitions and detailed positive, negative and edge-case examples and rules for each type. These guides ensure consistent classification, clearly define the boundaries of each type and specify what to do in cases of ambiguity. When applied to the full dataset, every article aligned cleanly with an existing category, providing validation that

the taxonomy is applicable to the dataset and offers a comprehensive framework for open-coding of Mamdani-related media coverage.

2. Link to Github
https://github.com/rtalwar05/COMP370_Final

3. LLM Summary of Each Category

Category	Concise Definition	LLM Summary	TF-IDF Terms
Affordability	Articles on Mamdani's stance on cost-of-living in NYC	"Zohran Mamdani as a polarizing, high-profile New York City mayoral candidate whose platform centers on aggressive affordability initiatives—rent freezes, tax hikes on wealthy individuals and corporations, universal childcare, free buses, government-run grocery stores, and major housing interventions."	Donald Trump, Rent, Housing, Freeze, Plan, Socialist, Affordability, Eric Adams, Democratic, Tax
Election & Campaign Results	Articles covering mayoral campaign events and outcomes	"Zohran Mamdani as a polarizing, high-visibility political figure whose mayoral rise is marked by sustained controversy, ideological tension, and intense public scrutiny.	Andrew Cuomo, Donald Trump, Democratic, Election, Race, Socialist, Debate, New Yorkers, Curtis Sliwa, Campaign
Immigration/ICE	Articles on Mamdani's stance on immigration policies	"Immigration politics as a central axis of conflict surrounding Zohran Mamdani's candidacy and mayoral transition."	Donald Trump, Born, Socialist, America, Illegal, ICE, Foreign, Aliens, Democrat, Sanctuary
Personal Life	Articles on personal background	"Intense public debate over Zohran Mamdani's identity, personal narrative, and background, focusing especially on Islamophobia directed at him and controversies stemming from his anecdote about a hijab-wearing relative after 9/11."	Aunt, Rama Duwaji, 11, Story, American, Hijab, Muslim, Mira Nair, Described, Speech
Police & Crime	Stance on Mamdani's stance on policing, NYPD and crime management	"Zohran Mamdani's evolving relationship with the NYPD, emphasizing his attempts to mitigate or apologize for past anti-police statements, his strategic outreach to law-enforcement audiences, and the political fallout surrounding those efforts."	NYPD, Police, Jessica Tisch, Cop, Commissioner, Department, Officers, Fox, Publicly, Unearthed
Political Figure Opinions	Articles covering Mamdani's interactions with other political figures	"Zohran Mamdani and his interactions with national and local figures, particularly President Donald Trump."	Donald Trump, Meeting, Democratic, White House, Socialist, Andrew Cuomo, Meet, Oval Office, Leader, Election
Political Identity	Articles on Mamdani's ideologies and identity	"Zohran Mamdani's mayoral candidacy as a flashpoint for ideological conflict within New York City and the broader Democratic Party."	Donald Trump, Starbucks, Democratic, Party, Socialist, Boycott, Democrats, Israel, Election
Popular Culture	Articles on cultural portrayals of Mamdani and interactions with popular individuals	"Zohran Mamdani's unprecedented, media-saturated New York City mayoral campaign as a major cultural, political, and celebrity-driven flashpoint."	Donald Trump, Socialist, Democratic, Fox, Campaign, Knicks, Host, Andrew Cuomo, Big, Political
